NT-4/5 may also be used to treat diseases induced by gram positive, gram negative and acid-fast bacteria. The present sequence is a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Treating ototoxin-induced neuronal-related balance impairment promoting vestibular ganglion neuron survival prior to, upon exposure to an ototoxin, comprises administering a trkB or tr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ρy
                                                                                     This invention relates to a matrix comprising a substrate capable of CC providing attachment of a heparin binding peptide (HBP), a peptide CC comprising a binding domain which binds heparin with high affinity, CC heparin or heparin-like polymer, and a protein growth factor or peptide CC rangent which has a domain that binds heparin with low affinity. CC Included in the invention is a vascular graft comprising the matrix, CC which is capable of supporting cell adhesion. The matrix is used for CC delivering low heparin binding affinity growth factor proteins or CC peptides in a controlled manner suitable for wound healing. The matrix CC can be used in an article for treating demai wounds, and in an CC implantable sterilized composition capable of supporting cell adhesion. CC The present sequence represents a growth factor protein. The protein is CC used in an example illustrating that non-heparin-binding growth factors can be released in a controlled manner from heparin-based drug delivery cycless based on their low affinity for heparin.

                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents recombinant human brain derived neurotrophic factor (BDNF) which has been produced in E. coli. BDNF may be used to treat epilepsy in mammals. The BDNF has a protective role in the regulation of neuroplasticity in the adult brain and blocks the development of epileptic seizures. The BDNF is preferably administered in an amount of 0.02-0.25 g/kg/day by intraparenchymal or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (AMGE-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer; polymerase chain reaction; amplify; PCR; brain-derived neurotrophic factor; BDNF; E.coli; signal transformation; dorsal root ganglia; chick embryo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents brain derived neurotrophic factor (BDNF). Tooding sequence was amplified using the primers given in AAQ8596-97 which were also used to link the amplified sequence was to an E.coli with sequence and further E.coli sequences which control gene expression. The recombinant sequences were used to transform E.coli for the large scale production of BDNF. The biological activity of the isolated BDNF was evaluated using dorsal root ganglia of an 8 day
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              05-JUL-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A portion of the coding sequence for mature human BDNF was amplified by PCR and the sequence determined. The deduced amino acid sequence for the region of at least amino acids 28 to 111 was identical to that of porcine BDNF. The BDNF can be used to sustain the survival of dopaminergic and cholinergic neurons of the CNS, to suppress the proliferation of astroglial cells, to inhibit the uptake of GABA into neurons and to upregulate the expression of NGF receptor on the cell surface.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents human brain-derived neurotrophic factor (BDNF). The protein encoded by this sequence promotes the survival of dorsal root ganglions. BDNF is a highly basic protein (isoelectric point, pI 10.1) which has a molecular weight of 12.3 kD. These characteristics are very similar to the nerve growth factor (NGF). The cDNA encoding this protein may be used in the construction of a chimeric nucleic acid molecule to encode a preproNGF/BDNF chimera (see also AAQ42568-69).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (AMGE-)

                                                                                                                                                                                                                                                                                     A novel recombinant vector has been developed which comprises a nucleotide sequence encoding a fusion protein. The fusion protein comprises three domains joined together in order, from N-terminus to comprises three domains joined together in order, from N-terminus to comprises in a first domain comprising a protein of interest, a second domain comprising anino acid residues. The present sequence represents human preproBDNF, used in example 6 of the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity chromatography in pro- or enkaryotic cells. This method allows for the efficient cleavage and generation of authentic proteins of interest that do not contain extraneous (i.e. non-naturally occurring) interest that do not contain extraneous (i.e. non-naturally occurring)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      31-JAN-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-AUG-1997.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO9728272-A1

Peptide
                                                                  growth factor (BDNF), a neurotrophic factor (NTF) that binds to TrkB receptor tyrosine kinase. The invention concerns Trks and their ligands that modulate cell growth, differentiation and survival. Trk proteins are known to mediate the activities of neurotrophins and are also known proto-oncogenes. Methods are claimed for screening for small molecule NTF mimetics, such as the cyclic peptide given in AAM50844, capable of binding to a Trk protein or of modulating the binding of a neurotrophin to a Trk protein. Also claimed are medicaments comprising a small molecule NTF mimetic and their use in claimed methods for treatment of cancer or a neurodegenerative disease selected from Huntington's disease, Parkinson's disease, Alzheimer's disease and amyotrophic lateral sclerosis.
                                                                                                                                                                                                                                 The present sequence is that of human recombinant brain-derived growth factor (BDNF), a neurotrophic factor (NTF) that binds to
                                                                                                                                                                                                                                                                                                        Screening for a neurotrophic factor mimetic, useful for treating, e.g., cancer and Alzheimer's, comprises combining a candidate mimetic with a fragment of a tyrosine kinase protein \,\cdot\,

                              A portion of the coding sequence for mature rat BDNF was amplified by PCR and the sequence determined. The sequence contains a number of conservative changes from the porcine BDNF gene although the deduced amino acid sequence for the region of at least amino acids 28 to 111 was identical to that of porcine BDNF. The BDNF can be used to sustain the survival of dopaminergic and cholinergic neurons of the CNS, to suppress the proliferation of astroglial cells, to inhibit the uptake of GABA into neurons and to upregulate the expression of NGF receptor on the cell surface.

                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for examining ischaemic cc conditions, comprising measuring the expression levels of particular cc genes (I) in a test sample or determining the expression profile of a cc gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring ce expression levels of particular genes (AB199202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the cexpression profile of a gene group comprising these genes. The cc expression levels or expression profiles produced by these genes are used as an indicator when screening for ischaemic condition-improving crugs or therapeutics for ischaemic diseases. AB199913 and AB199914 crepresent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
